Radiology Interpretation

PATIENT NAME: FIOR BERNAL
DATE OF BIRTH: 09/23/1951
ID/MRN: BF92351
CLINICIAN: DR. ROOK, ROBERT
FACILITY: DYNAMIC MOBILE XRAY SERVICES LLC
DATE OF EXAM: 05/29/2025
HISTORY: M54.6-PAIN IN THORACIC SPINE, M25.512-PAIN IN LEFT SHOULDER, M25.551-PAIN IN RIGHT HIP, M79.641-PAIN IN RIGHT HAND

SPINE THORACIC X-RAY 2 view:

Comparison: None

FINDINGS:

Motion artifacts are present.

Multiple views of the thoracic spine demonstrate normal alignment. Moderate spondylosis of the thoracic spine is present.

There are no acute fractures or subluxations of the thoracic spine.

The soft tissues are unremarkable.

If there is further concern or neurological abnormalities on clinical exam, recommend further radiographic views, MRI or CT of the thoracic spine for complete assessment.

IMPRESSION:

No acute fracture or subluxation of the thoracic spine.

RIGHT SHOULDER X-Ray Complete 2 or more views:

Comparison: None

FINDINGS:

Multiple views of the right shoulder show normal alignment at the gleno-humeral joint. Moderate osteoarthritis is seen in the gleno-humeral joint. Diffuse osteopenia is seen throughout the bones.

There are no acute fractures or dislocations.

The acromioclavicular joint and coracoclavicular spaces are intact.

The visualized scapula and clavicle are unremarkable.

There are no radiopaque foreign bodies.

No soft tissue swelling is seen.

If there is further concern, follow-up radiographs or MRI of the shoulder may be performed for complete assessment.

IMPRESSION:

No acute fracture or dislocation of right shoulder.

RIGHT Hip X-Ray unilateral 2-3 views :

Comparison: None

FINDINGS:

Multiple views of the right hip show normal alignment without acute fractures or dislocations. Moderate osteoarthritis is seen in the right hip joint.

There are no radio-opaque foreign bodies.

The acetabulum is unremarkable.

The visualized sacroiliac joint and symphysis pubis are unremarkable.

If there is further concern, recommend follow-up radiographs or MRI for complete assessment.

IMPRESSION:

**No acute fracture or dislocation of the right hip.
Osteoarthritis.**

RIGHT Arthritis X-Ray Joint Survey Hand 1V:

Comparison: None

FINDINGS:

A single view of the right hand shows normal alignment without acute fractures or dislocations.
Mild to moderate osteoarthritis is seen in the joint spaces. Diffuse osteopenia is seen throughout the bones.
There is no soft tissue swelling.
No radiopaque foreign bodies are seen.
The visualized incompletely evaluated wrist region is grossly unremarkable.
If there is further concern, recommend follow-up radiographs for complete assessment.

IMPRESSION:

**No acute fracture or dislocation of the right hand.
Osteoarthritis.**

PATIENT NAME: KAREN DIAZ
DATE OF BIRTH: 01/06/1997
ID/MRN: KD1697
CLINICIAN: DR. ROOK, ROBERT
FACILITY: DYNAMIC MOBILE XRAY SERVICES LLC
DATE OF EXAM: 05/29/2025
HISTORY: M25.552-PAIN IN LEFT HIP, M54.6-PAIN IN THORACIC SPINE

SPINE THORACIC X-RAY 2 view:

Comparison: None

FINDINGS:

Limited exam on the lateral view due to body habitus.

Multiple views of the thoracic spine demonstrate normal alignment.

There are no acute fractures or subluxations of the thoracic spine.

The vertebral body heights and disc spaces are grossly preserved.

The soft tissues are unremarkable.

If there is further concern or neurological abnormalities on clinical exam, recommend further radiographic views, MRI or CT of the thoracic spine for complete assessment.

IMPRESSION:

No acute fracture or subluxation of the thoracic spine.

LEFT Hip X-Ray unilateral 2-3 views :

Comparison: None

FINDINGS:

Multiple views of the left hip show normal alignment without acute fractures or dislocations.

There are no radio-opaque foreign bodies.

The acetabulum is unremarkable.

The visualized sacroiliac joint and symphysis pubis are unremarkable.

If there is further concern, recommend follow-up radiographs or MRI for complete assessment.

IMPRESSION:

No acute fracture or dislocation of the left hip.

Radiology Interpretation

PATIENT NAME: DELANEY JOHNSON
DATE OF BIRTH: 09/15/1958
ID/MRN: DJ91558
CLINICIAN: DR. ROOK, ROBERT
FACILITY: DYNAMIC MOBILE XRAY SERVICES LLC
DATE OF EXAM: 05/29/2025
HISTORY: R07.9-CHEST PAIN, UNSPECIFIED

Chest X-Ray 1V:

Comparison: None

FINDINGS:

A single frontal radiograph of the chest demonstrates normal lung volumes.
No interstitial or airspace opacities are seen.
No pleural effusions are present.
No pneumothorax is visualized.
The heart size is enlarged. The trachea is midline.
The visualized skeleton is unremarkable.

IMPRESSION:

No chest radiographic evidence of acute cardiopulmonary disease.

Radiology Interpretation

PATIENT NAME: ASHLEY MOULIER**DATE OF BIRTH: 09/29/1993****ID/MRN: AM92993****CLINICIAN: DR. ROOK, ROBERT****FACILITY: DYNAMIC MOBILE XRAY SERVICES LLC****DATE OF EXAM: 05/29/2025****HISTORY: M54.6-PAIN IN THORACIC SPINE, M25.512-PAIN IN LEFT SHOULDER, M25.562-PAIN IN LEFT KNEE**

SPINE THORACIC X-RAY 2 view:

Comparison: None

FINDINGS:

Motion artifacts are seen along the lateral view.

Multiple views of the thoracic spine demonstrate normal alignment.

There are no acute fractures or subluxations of the thoracic spine.

The vertebral body heights and disc spaces are grossly preserved.

The soft tissues are unremarkable.

If there is further concern or neurological abnormalities on clinical exam, recommend further radiographic views, MRI or CT of the thoracic spine for complete assessment.

IMPRESSION:**No acute fracture or subluxation of the thoracic spine.**

LEFT SHOULDER X-Ray Complete 2 or more views:

Comparison: None

FINDINGS:

Multiple views of the left shoulder show normal alignment at the gleno-humeral joint.

There are no acute fractures or dislocations.

The acromioclavicular joint and coracoclavicular spaces are intact.

The visualized scapula and clavicle are unremarkable.

There are no radiopaque foreign bodies.

No soft tissue swelling is seen.

If there is further concern, follow-up radiographs or MRI of the shoulder may be performed for complete assessment.

IMPRESSION:**No acute fracture or dislocation of left shoulder.**

LEFT KNEE X-Ray - 1-2 view:

Comparison: None

FINDINGS:

Motion artifacts are present.

Multiple views of the left knee show normal alignment without acute fractures or dislocations.

The medial and lateral tibiofemoral compartments and patellofemoral compartment are unremarkable.

There are no joint bodies.

There is no knee region soft tissue swelling.

There is no joint effusion.

There are no radiopaque foreign bodies.

If there is further concern, recommend follow-up radiographs or MRI for complete assessment.

IMPRESSION:

No acute fracture or dislocation of the left knee.

LEFT SHOULDER X-Ray Complete 2 or more views:

Comparison: None

FINDINGS:

Multiple views of the left shoulder show normal alignment at the gleno-humeral joint.

There are no acute fractures or dislocations.

The acromioclavicular joint and coracoclavicular spaces are intact.

The visualized scapula and clavicle are unremarkable.

There are no radiopaque foreign bodies.

No soft tissue swelling is seen.

If there is further concern, follow-up radiographs or MRI of the shoulder may be performed for complete assessment.

IMPRESSION:**No acute fracture or dislocation of left shoulder.**

RIGHT SHOULDER X-Ray Complete 2 or more views:

Comparison: None

FINDINGS:

Multiple views of the right shoulder show normal alignment at the gleno-humeral joint.

There are no acute fractures or dislocations.

The acromioclavicular joint and coracoclavicular spaces are intact.

The visualized scapula and clavicle are unremarkable.

There are no radiopaque foreign bodies.

No soft tissue swelling is seen.

If there is further concern, follow-up radiographs or MRI of the shoulder may be performed for complete assessment.

IMPRESSION:**No acute fracture or dislocation of right shoulder.**

LEFT Hip X-Ray unilateral 2-3 views :

Comparison: None

FINDINGS:

Multiple views of the left hip show normal alignment without acute fractures or dislocations. Mild osteoarthritis is seen in the hip joint.

There are no radio-opaque foreign bodies.

The acetabulum is unremarkable.

The visualized sacroiliac joint and symphysis pubis are unremarkable.

If there is further concern, recommend follow-up radiographs or MRI for complete assessment.

IMPRESSION:

No acute fracture or dislocation of the left hip.
